Office Action Summary

Art Unit: 1617

The final rejection is withdrawn. Prosecution is reopened in view of a finding of new art:

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 16-30 rejected under 35 U.S.C. 102(b) as being anticipated by Cioca.

Cioca teaches an implantable composition comprising alkali-treated freeze dried collagen comprising biological actives which are slowly released (abstract). Plural actives are specified (column 4 lines 64-68). A bacteriostat is disclosed (column 5 line 7). Treatment of burns is specified (column 5 line 10). A spongy mass is disclosed (column 4 line 18). Compressability is specified (column 6 line 15). As to the various claimed properties, such as fractionation of molecular weights of collagen, they must be possessed by the anticipatory composition because it is the same as that claimed. As to claimed processes in composition claims, such as obtaining collagen from calf skin, these steps are not considered patentable limitations during prosecution of such claims before the USPTO.

No claims allowed.
